Oxbow guinea pig care sheet

Provide a variety of vegetables. A variety is necessary to obtain the necessary nutrients, with one every day containing vitamin A. Add a vegetables to the diet at a time. Eliminate if it causes soft stools or diarrhea. This is an excellent site for the vitamin content of vegetables: The following vegetables can be supplied: (!)=Use no more than twice a week. High in oxalates or goitrogenics and can be toxic in accumulated quantities during a period of time. (*)=Use no more than twice a week. 1 AFTER LINES - 1 AFTER LINES Pea pods (flat edible type)* Peppermint leaves Radical – 1/2 CUP Radiant buds – 3 LEAVES leaves of raspberry rhymenic lettuce (without iceberg or light colored leaf) or red/green leaf - 2 LEAVES Watercress* correctly feed the rabbits and pigs of Guinea can go very far to prevent many of the health problems these beautiful creatures are prone toUnfortunately, the advice and information provided by pet stores is often inadequate or even completely incorrect. Our feed guide can help you set the right path to keep your pet healthy. We have provided a premium Oxbow food range for rabbits and guinea pigs at Edgeworth Animal Medical Centre to help you start on the right path for proper feeding for your pet. Hay: A suitable and high quality hay should be provided to animals morning and evening, as these are their peak feeding times. Hay should make up most of the diet. A general guideline is to feed at least a quantity of hay similar to the size of each animal. Hay can be fed to lib (as much as you like). The figs can be divided into grass (Timothy, orchard grass, Oaten, ryegrass, lawn) and legumes (Lucerne, clover). Herb hay are tall in fiber and lower in protein and are the best hay to feed as a maintenance diet for adult rabbits and guinea pigs. Legumes hay are lower in fiber, higher in calcium and protein and are suitable for feeding growing, pregnant and milking animals. Legume barns should not be fed as a maintenance diet as they can predispose to gastrointestinal stasis, obesity and formation of kidney or bladder calculations. The quality of the hay varies and that the purchase of both bales or hay packages should be able to assess the quality and buy only what is good. High quality hay was cut when the plant is young and grows. It should consist of green leafy material with minimal stems; small of young flowers and seed heads can also be present. The hay should feel soft and smell fresh and sweet and be free of intrusive weeds, roots and dirt. The poorest quality hay will be evident from brown to yellow coloring and greater stem content. They can be dusty and friable. Wet barns, molds or otherwise contaminated should never be purchased. Hay must be kept in dry, cold and dark conditions. If your pet is not used to eating hay, talk to a staff member about hay varieties that can make the transition easier. That's not true. Straw is a product of grain crop waste and consists of ripe wheat dried stems with some seed heads. It has a minimum nutritional value. Although animals chew and eat parts of it, it should be provided as bed linen only and not part of the diet of animals. The straw is however an important enrichment for the comfort of the animal and should also be clean, fresh and devoid of contaminants and vices. Pellets: Animals that are supplied with sufficient amounts of hay, grass and fresh vegetables do not actually need pellets. Excess feeding of pellets can contribute to gastrointestinal stasis and lead to obesity. Pellets also do not allow rabbit/chine to chew with the complete range of movement necessary for proper teeth wear, so often dental problems occur. Pellet blends with seeds, cereals and treatments should never be given as this allows selective feeding of high carbohydrate products that can cause severe gastrointestinal stasis.and cavies are not designed to eat seeds. Correct rabbit diet lungo Long stem fiber (>5mm) is the main driver of normal motility and intestinal function! di Rabbits preferably select the highest concentrated food source available (the highest available calories that are not really the healthiest). If too much food is available to pellets, it will fill up on this and have no reason to eat the healthiest hay! Hay: or Should compensate for most rabbit diet or Give an approximate amount equal to rabbit size every day; or essentially what it likes or For young rabbits Lucerne's hay is fine – it is higher in protein and calcium or For adult/mature rabbits – they should have grass hay, shy hay, mixed hay; Lucerne is too high in the protein. Grass: or As much as they like (ad lib) or make sure not recently sprayed with herbicide/pesticide Fresh leafy Greens: (see website: House Rabbit Society) or 1-2 cups per day for rabbit Ideally 3-4 varieties per day; or Leafy Greens (low in oxalic acid) include) Arugula, Endive, Escarole, Frisee Lettuce i Carrot tops i Kale (all types) i Turnip greens, Dandelion greens i Bok Choy, Yu choy) Fennel (leather buds and base) or Leafy Greens (higher in oxalic acid) – limit to 1 per day di Parsley di Spinach di Mustard Greens di Swiss chard di Radiant Top Other fresher limit to 1 tablespoon. per day per kg of rabbit (so 2 tablespoons for a rabbit of 2 kg) di carrots di broccoli (foglie and steli), broccolini) , edible flowers (rose, nasturtium, pansies, ibiscus) di celery di capsicum (any color) di pumpkin peel, vegetables (any type; kg) 2 tablespoons. if the rabbit 3kg or should have a minimum raw fiber of > 18% or preferably grass or base thymotes (poor than light) or should not have seeds or grains mixed in fruit: or should be reserved as special treatment or training treatment; not be fed every day or only healthy animal feed without recent history of gut stasis or max 1 teaspoon per kg per day or apple, pear or cher sliceries or peach, plum, nectarine, apricot or kiwi or mango, papaya or berries (any type) or melons (any – may include skin and seeds) water: or rabbits have water supply 120ml (2kg rabbit drinks up to 10kg dog) or always make sure that there is a supply of fresh clean water available or in rabbits, water intake often increases with reduced/fasting appetite – this can be a warning signal that something does not go with your pet. o this type of excessive drinking can lead to depletion of sodium (sale) proper guinea diet pig guinea pig are demanding eaters who develop particular food preferences very soonLife. For this reason, changes to the diet should be made very slowly and the animals monitored as they are known to go on "hunger dumps" if presented with non-family or different foods. Also changing the brand of pellets or an unusual taste of water can induce anorexia. Guinea pigs must have a preformed vitamin C source in their diet as they are not able to synthesize it from glucose as rabbits can. Normal and healthy adult cavies require 10 mg/kg/day to prevent Scurvy. Growing animals, pregnant or breastfeeding require about 30 mg/kg/day and for animals who are sick or lacking up to 50 mg/kg/day is recommended. Hay: or Should compensate for most of the diet or Feed a quantity approximately equal to the size of the animal every day; or essentially to lib or For young guinea pigs the hay of Lucerne is ok – higher in protein and calcium or For adult / mature cables – hay of grass, shy hay , mixed hay is better; Lucerne is too high in Erba protein: or As far as they want (ad lib) or make sure not recently sprayed with herbicide/pesticide Fresh greens: either 1-2 cups per day or Ideally 3-4 varieties per day; or Leafy Greens (low in oxalic acid) i Arugula, Endive, Escarole, Frisee Lettuce i Carrot tops i Kale (all types) i Mint, Basil, Coria Bok Choy, Yu choy) Fennel (leather buds and base) or Leafy Greens (higher in oxalic acid) – limit to 1 per day) Parsley di Spinach ; Mustard Greens;Swiss chard Swiss/Silverbeet ' Top of radiants Other fresh vegetables: or Capsicum – 1/8-1/4 of capsicum for Guinea pig/day – are an excellent source of vitamin C (Red>Orange/giallo>green) or Limit to 1 tbsp. per day di Carrots di Broccoli (foglie e steli), Broccolini) , Edible flowers (rose, nasturtiums, pansies, ibiscus) sp Celery sp Brussels spruce, Cabbage (any type) di Summer breaks, squash Zucchini or Avoiding beans, peas, snow peas – these are legumes or should have a minimum raw fiber of > 18% or preferably grass or base thymotes (poor than light) Fruit: or GP have a higher tolerance for fruit than rabbits; are an excellent source of vitamin C; or Small daily service of about 1 teaspoon per day (in order of vitamin C content) ' Cherry ' Berries (any type)) Peach, Plum, Nettareine, Apricot ' Apple, Pear Water: or Guinea pigs have a much lower water intake than rabbits and if getting a lot of fresh greens and very succulent drinking herb. or However, make sure there is a supply of fresh clean wateror If you are travelling with your piglets of India or bring them somewhere else, it is useful to pack a regular water supply to help the transition to the taste of the "new" water – especially if you switch to the shape water that can have a decidedly different taste. taste. is oxbow good for guinea pigs
